

spectral

extraction gate 0/4:
edges track GOE, no plateau,
negative entropy C

parametric

$\beta/C \in [28, 332]$ everywhere:
nowhere near semiclassical

correlator

$\hat{G}(1)$ below the conformal floor
for every $\beta \leq 20$; C_{fit} inconsistent

$N \leq 18$ has not reached
the Schwarzian regime

three independent lines, one conclusion

no single probe carries this on its own — the agreement between them is the result
