

$$\varphi = S(A) \cdot I(A:B) = 2(\log 2)^2 = 0.9609060$$

EPR $d = 1/I(A:B)$

0.7213475204

ER $\ell = S(A)$

0.6931471806

ER rescaled by φ

0.7213475204

Wasserstein after rescaling = 0.0e+00 (exact, double precision)

ripser reports these bars in float32 (0.7213475, 0.6931472); the isomorphism check uses the exact values
